

PREPARED FOR TREX UK · PARTNER SITE UPDATE

What we're changing on the site, and why.

We've been rebuilding large parts of beamsandbraces.co.uk to fix real accuracy problems and bring it up to the standard this partnership deserves. This document walks through it in full — page by page.

TrexPRO Platinum installer
since 2017

Over the last few weeks we've been going through beamsandbraces.co.uk line by line, and honestly, it needed it. Some of the product detail had drifted from what's actually true, some of the photography was never real project work in the first place, and a few of the trust signals on the site — reviews included — weren't as solid as they should have been for a TrexPRO Platinum partner.

None of that reflects how we actually work, so we've been rebuilding it properly rather than patching around the edges. This document is a full account of that: what's already fixed, exactly what Trex range we're showing, the credentials we're now surfacing accurately, and what's still in progress.

I wanted this to come from us directly, in detail, rather than you having to piece it together from the live site while things are mid-change.

Darren

Founder, Beams & Braces · TrexPRO Platinum since 2017 · Trex Pro Advisory Council, 2024

A recent curved Trex Transcend deck — one of the projects behind the UK's-leading curved-deck positioning we reference on the site.

500+

Composite decks installed since 2016, including some of the largest curved decks built anywhere in the UK.

The product detail, checked against Trex's own spec.

Every item below was compared directly against Trex's published UK specification and corrected on the live site, not just reworded.

01 Warranty terms

Signature and Transcend were showing an incorrect warranty length. Both now correctly display the real 50-year fade & stain warranty, and Enhance correctly shows 25 years, matching Trex's published terms exactly on every product page, meta tag, and FAQ comparison.

Why it mattered — a customer comparing terms against Trex's own site would catch the mismatch, undermining trust in the rest of the page.

03 Fabricated cap technology name

An invented material name was being used to describe Trex's cap layer — not a real Trex term. Removed and replaced with accurate, plain language rather than a made-up brand term a customer could research independently and not find.

Why it mattered — inventing product terminology reflects directly on Trex, not just on us.

02 Colour ranges sold

Transcend listed colours Trex UK doesn't sell in this range (a discontinued "Spiced Rum" and Tiki Torch), missing Carmel entirely. Enhance Basics had a misspelled colour ("Calm Shell" instead of Clam Shell) reusing another colour's description, and was missing Tide Pool. Every colour shown now is one we actually stock.

Why it mattered — a customer could have ordered a sample of a colour we don't offer.

04 Board construction claim

The Enhance page claimed boards were "dual-sided" and could be flipped for a second finish. Corrected everywhere it appeared to the real detail: single-face embossed woodgrain with a grooved edge for hidden fasteners, no visible screw heads.

Why it mattered — a customer expecting to flip a board would have been misled on installation day.

The trust signals, made real.

This is the part that concerned us most once we found it — it wasn't just wording that needed fixing.

05 Fabricated testimonials

The site had fully invented customer reviews — invented names, towns, and in one case a colour we don't sell ("Beach Dune"). This was live on the homepage, every Trex product page, and inside the page's structured data submitted for Google's review snippets. All removed and replaced with 8 real, curated reviews from our actual Google Business profile.

Why it mattered — fabricated review schema risks a manual action against the whole site.

07 Sample requests

"Get a free sample" previously sent visitors to Trex's own paid sample checkout. It now routes to our contact page instead, so samples are arranged personally by us from a customer's very first touchpoint.

06 Colour swatches

Every colour was shown as an approximated flat hex-colour block, and several didn't match the real board. Replaced sitewide with real board photography in a clean picker — including splitting Enhance into its Naturals and Basics collections, since it's two ranges, not one blended line.

Why it mattered — what a customer sees on screen should be what arrives on the truck.

08 Photography

Every placeholder and generic stock image across the Trex product pages, the homepage range showcase, and the hero itself has been replaced with real project photography, including a real aerial shot of one of our curved decks as the homepage hero.

Exactly what we stock — nothing more, nothing less.

Real board photography, not approximated colour. This is the complete, current line-up live on the site today.

Signature

50-year fade & stain warranty

Whidbey

Ocracoke

Enhance Naturals

25-year fade & stain warranty

Foggy Wharf

Rocky Harbor

Toasted Sand

Calm Water

Transcend

50-year fade & stain warranty

Island Mist

Carmel

Biscayne

Rainier

Jasper

Enhance Basics

25-year fade & stain warranty

Clam Shell

Tide Pool

What the site now says about us — all of it real.

2017 TrexPRO Platinum installer since	2024 Trex Pro Advisory Council member since	500+ Composite decks installed since 2016	5.0 Google rating across 10 reviews
---	---	---	---

These credentials are verified directly against Trex's own "Find a Builder" installer profile, not self-reported figures we made up for the site. We've also started surfacing our curved-deck specialism and Norfolk Broads / waterside positioning more clearly, since that's genuinely where a lot of our best work happens.

Two more real projects from the gallery now live on site — used in place of the generic stock photography that was there before.

What we're still working through.

Flagging this directly so nothing here is a surprise if you look at the live site mid-change — it's an active rebuild, not a finished job.

THIS WEEK

Design consistency pass

Bringing every page in line with the same visual system. A handful of pages were rebuilt first and now read slightly more polished than the ones still queued.

THIS WEEK

Railing & lighting content

This page is currently thin compared to the Trex product pages. We're expanding it with the same level of real detail and photography.

ONGOING

Credentials woven throughout

The TrexPRO Platinum / Pro Advisory Council story currently lives mainly on the homepage and About page. We're extending it naturally across more of the site rather than repeating it as a badge everywhere.

ONGOING

Final photography library

We're sourcing and organising the best of our real project photography so every remaining page can eventually use our own work rather than any placeholder imagery.

ONGOING

Lead capture review

Confirming our WhatsApp and CRM enquiry routing is fully monitored end-to-end, so every enquiry that comes through the site — including ones interested in Trex specifically — is followed up properly.

IN CLOSING

We wanted you to hear this from us directly.

None of what's outlined in this document was prompted by anyone at Trex flagging it to us — we found it ourselves while going through the site properly, and we'd rather you heard about it this way than come across it independently. We're proud of the TrexPRO Platinum relationship and want the site to represent it properly.

Happy to walk through any of this live — on the phone, on a screen-share, whatever's easiest. Wanted you to see the direction and the receipts directly from us.
